Dental

In 2017 22% rated their dental health as fair or poor Vic 24%

In 2017 **43%** delayed or avoided visiting a dental professional due to cost Vic 34%

Chronic Disease

In 2017, **27%** of respondents had two or more chronic diseases Vic 25%

Diseases included:

- Cancer **10%** Vic 8%
- Heart Disease 8% Vic 7%
- Osteoporosis 5% Vic 6%
- Arthritis 21% Vic 21%
- Type 2 Diabetes 4% Vic 5%
- Hypertension 24% Vic 25%

The impact of COVID-19

From the beginning of 2020 to 20th October 2020 there were 57 confirmed cases of COVID-19 in Ballarat

Compared to regional Victoria, Ballarat recorded a lower rate per population

VicHealth completed two surveys in 2020 to explore how the health and wellbeing of Victorians was affected by the coronavirus pandemic – this a summary of the results [VicHealth 2020]

Wellbeing

16% of Victorians experienced high psychological distress in the first lockdown

The frequency of high psychological distress was *significantly higher* for people in inner metro Melbourne (24%) compared to those in regional cities (10%)

49% of Victorians had lower levels of life satisfaction. This *increased* to 53% during the second wave

Social Connection

23% of Victorians did not feel connected with others, this was up from 10% before the pandemic. This *increased* to 29% during the second wave

Healthy Eating

The number of Victorians drinking sugary drinks each day *tripled* to 32%

17% were worried about having enough money to buy food compared to 9% before the pandemic

28% cooked dinner more frequently during the first lockdown

Physical Activity

37% of Victorians exercised less during the first lockdown compared to Feb 2020

27% were physically inactive during the first lockdown

Alcohol

During the first wave of the pandemic, the risk of short-term harm from alcohol consumption was 11%. This *decreased* to 7% during the second wave.

Smoking

13% of Victorians who smoke attempted to quit – 7% were successful

23% of Victorians who smoke reported smoking more than usual. This was due to anxiety or stress (55%), boredom (51%) and having more free time (46%)

Victorian Priorities for Promoting Health & Wellbeing

A star rating system has been used to show how the LGA indicators for each priority compare with the Victorian data. Please note that this information should be used as a guide only.

- ★ = indicators are generally less favourable than the Vic average
- ★★★ = indicators are much the same than the Vic average
- ★★★★★ = indicators are generally more favourable than the Vic average

Priority: Tackling climate change and its impact on health

Climate change projections for Central Highlands

[Dept. ELWP 2020]

By 2030, increases in daily maximum temperature of 0.9 to 1.7°C are expected

Rainfall will continue to be very variable over time, but over the long term is expected to continue to decline in winter and spring

Extreme rainfall events are expected to become more intense on average through the century

By the 2050's the climate of Ballarat could be more like the climate of Hamilton

Climate change & health impacts [Sustainability Vic 2020]

Climate change is impacting the health of Victorians:

- There were 445 deaths due to the smoke of the 2020 Black Summer bushfires
- More than 400 people hospitalised due to the smoke of the 2020 Black Summer bushfires
- In the 2014 heatwave Ambulance Vic had a 700% rise in call-outs for cardiac arrests
- There has been a 10-fold increase in reported cases of Ross River Virus since 1993

Victorians & the impact of climate change

[Sustainability Vic 2020]

Victorians rank health as the issue most important to them – 90% haven't thought about how health is affected by climate change

Most healthcare professionals believe a range of health conditions will become more common as climate change impacts increase. These include:

- Lung complaints
- Heat stress
- Pollen allergies
- Mental illness/depression/anxiety
- Thunderstorm asthma

79% of healthcare professionals feel overwhelmed when thinking about the future impacts of climate change compared to 41% of Victorians

86% of healthcare professionals see a role for themselves in informing the public about the health impacts of climate change

- 88% agree there is a need for more training and development opportunities

Priority: Reducing injury ★★★★★

Between 2014/15 - 2018/19 the hospitalisation rate for accidental injuries in Ballarat was 1,662
Vic 1,864

Hospitalisations for selected causes during the same period include:

- Transport 13.4% Vic 13.9%
- Falls 46.7% Vic 46.9%
- Hit/struck/crush 7.6% Vic 8.7%
- Natural environment/animals 3.5% Vic 3.1%

Hospitalisation rates for falls for 2014/15 - 2018/19

- All persons 777 Vic 874
- Persons aged >64 years 2,644 Vic 3,235

For 2013 – 2017 rate of avoidable deaths from accidental injuries in Ballarat were:

- All external causes of mortality (excl. suicide) 12.1 Vic 13.1
- Transport accidents **5.8** Vic 4.5

In Ballarat, the most common industry sectors for Workcover claims between 2015–2019 were:

- Health care & social assistance 22%
- Manufacturing 18%

Between 2014/15 - 2018/19 the hospitalisation rate for working for income was 6% of all accidental injury hospitalisations Vic 7%

Priority: Preventing all forms of violence ★★

Crimes against persons

In 2019/2020 the rate of crimes against people (victims) in Ballarat was **1,373.4** Vic 1,237.5

Crimes against persons – by sex (2016-2019)

Assault & related offences	 46% Vic 48%	54% Vic 52%	
Stalking & harassment and threatening behaviour	 30% Vic 33%	70% Vic 67%	
Sexual offences	 22% Vic 17%	78% Vic 83%	

Hospitalisations for assault related injuries

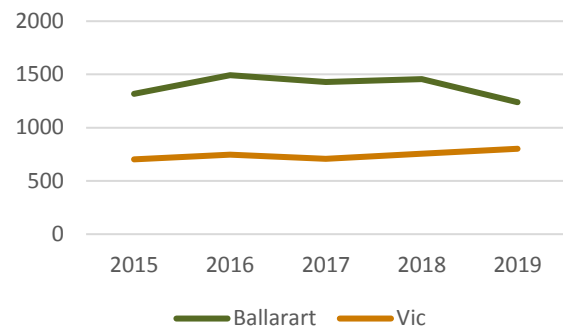

In 2014/15 – 2018/19 the rate of hospitalisations in Ballarat was 48 Vic 64

Family Violence

In 2017, **5.9%** of people reported that they experienced family violence Vic 5.4% [VAHI 2020]

In 2019 the rate of affected family members – *the individual who is deemed to be affected by events occurring during a family incident* – was **1,476** Vic 1,282. This represents a **decrease of 17.3%** from 2018/2019 Vic +4.4%

Reported Incidents of Family Violence - Females [WHA]

In 2019, **77%** of affected family members (victims) were female

In 2019 the proportion of affected family members aged 18 – 24 years was **18%**, much higher in Ballarat compared to the state average Vic 13%

Priority: Increasing healthy eating ★★★

In 2017, 5% of respondents did meet the fruit & vegetable consumption guidelines Vic 3.6% [VPHS 2017]

45% of respondents *did not* eat enough fruit & vegetables to meet the consumption guidelines Vic 51.7% [VPHS 2017]

In 2017 respondents ate an average:

- 1.7 serves of fruit/day Vic 1.6
- 2.3 serves of vegetables/day Vic 2.2

10% of respondents never ate takeaway meals or snacks Vic 14.9% [VPHS 2017]

- 72.2% eat takeaway meals or snacks 1 or less times a week Vic 69.1%
- **16.7%** eat takeaway meals or snacks more than 1 times a week Vic 15.3%

In 2017 **11.2%** of respondents drank sugar sweetened soft drinks daily Vic 10.1% [7]

Priority: Decreasing the risk of drug-resistant infections in the community

Antimicrobial use & appropriateness in Australia [AURA 2019]

NB. No state or local data is currently available

In 2017, 41.5% of Australians had at least one systemic antibiotic dispensed

After a steady increase in the rate of antibiotic dispensing between 2013 and 2015, there was a decline in 2016 and a further decline in 2017

Approx 50% of all antibiotic prescriptions were ordered with repeats; of those repeats approx. half were filled within 10 days of the original prescription

A large percentage of patients from practices that participate in MedicineInsight were prescribed antibiotics for conditions for which there is no evidence of benefit:

- 52% of patients with Influenza
- 92.4% of patients with bronchitis

Priority: Increasing active living ★★

In 2017, 2.2% of respondents were classified as sedentary Vic 2.5% [VPHS 2017]

49.4% did not do sufficient levels of physical activity Vic 44.1%

46.12% met the guidelines for physical activity Vic 50.9%

In 2016, 1% of respondents cycled to work Vic 1% and 3% walked to work Vic 4%

In 2017 the average length of time people sit during a weekday is:

- < 2 hours – 6.8% Vic 6.6%
- Two to < 4 hours – **28.3%** Vic 27.1%
- Four to < 6 hours – **26.2%** Vic 24.8%
- Six to < 8 hours – **17.7%** Vic 14.4%
- Eight hours or more – 17.9% Vic 22.0%

Proportion of people who spend >7 hours sitting:

- Weekday – 25.4% Vic 26.6%
- Weekend – **16.2%** Vic 14.1%

Priority: Improving mental wellbeing ★★★

20.5% of respondents from Ballarat rated their satisfaction with life as low or medium Vic 20.5% [VPHS 2017]

A higher proportion of males were more likely to rate their 'feeling that life was worthwhile' as low or medium.

Community Connections

NB. The data is only available for combined LGAs

In 2018, 70.7% of respondents from Ballarat and Golden Plains 'make time to keep in touch with my friends' regularly/all the time Vic 65.5%

62.3% reported that 'I spend time doing things with family members who don't live with me' regularly/all the time Vic 51.0%

85.0% of respondents from Ballarat and Golden Plains agree that 'I feel welcome here' Vic 73.2%

74.1% of respondents from Ballarat and Golden Plains agree that 'I feel part of my community' Vic 68.4%

Psychological Distress & Mental Ill-health

In 2017, 17.9% of respondents had high or very high levels of psychological distress Vic 15.4% [6]
